4-H/FFA Steer Ultrasound Data Explanation

Column 1:	Tag Number
Column 2:	Exhibitor Number
Column 3:	Live Wt. (provided by Shenandoah County Extension Office)
Column 4:	Carcass Wt. (ending live wt. x 63.5% dressing)
Column 5:	Carcass Wt. Points
Column 6:	Ultrasound rib eye area
Column 7:	Average REA required (based on carcass weight)
Column 8:	REA Points
Column 9:	Ultrasound Rib Fat
Column 10:	Fat Thickness Points
Column 11:	Ultrasound %IMF
Column 12:	Marbling Score (based on %IMF and used to determine quality grade)
Column 13:	Quality Grade (based on ultrasound data, <u>NOT</u> Live quality grade)
Column 14:	Quality Grade Points
Column 15:	Yield Grade (calculated using carcass wt., REA, and back fat)
Column 16:	% Retail Product (calculated based on carcass weight, back fat, and muscling)
Column 17:	Index Points (Beef Empire Days Carcass Index)
Column 18:	Final Ranking

****This year steers were ranked using the Beef Empire Days Carcass Index System. This system assigns points in several relevant traits and recognizes carcasses within acceptability windows for several traits.**

Beef Empire Days Carcass Index System

The Beef Empire Days Carcass Index is calculated from a base of 100 points with bonus and penalty point adjustments for hot carcass weight (HCW), adjusted backfat, ribeye area (REA), internal kidney-pelvic-heart fat (KPH), and USDA Quality Grade (QG). Carcass traits that are closer to the desired ideal specifications will have higher indices. Bonus points awarded to carcasses having larger ribeyes, low KPH fat, and QG above low Choice will improve indices. The following is a description of the index adjustment procedures for each of the carcass traits.

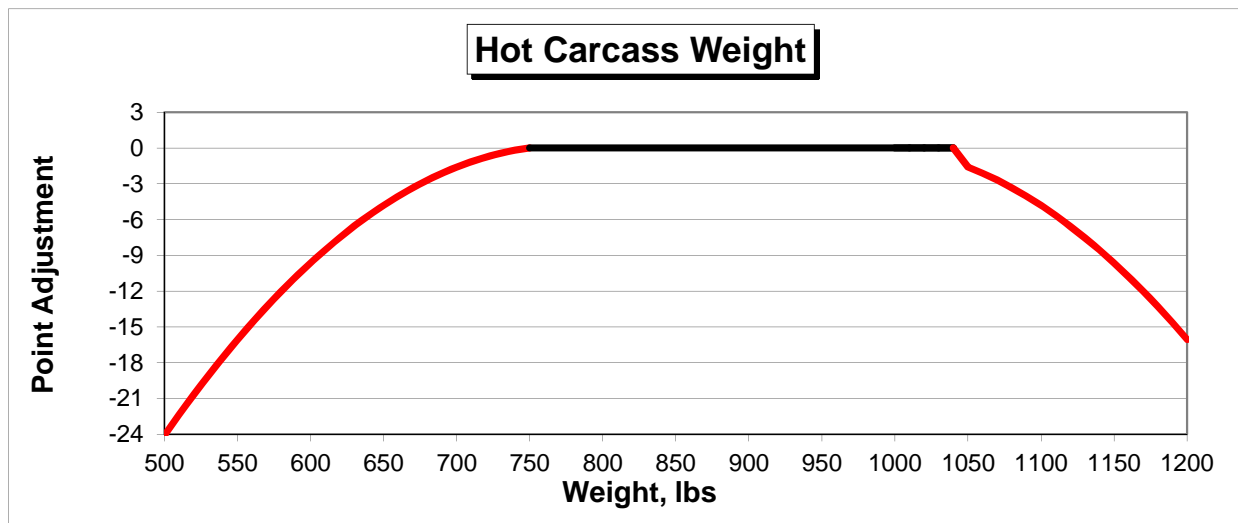

Hot Carcass Weight

The optimum range for hot carcass weight is defined as 750 to 1050 lbs. for both steers and heifers. The indices of carcasses with weights outside that range are penalized according to the following table.

Hot Carcass Weight Adjustment

HCW	Points	HCW	Points	HCW	Points
500	-24.1	610	-8.55	720	-0.77
510	-22.36	620	-7.52	730	-0.45
520	-20.69	630	-6.55	740	-0.19
530	-19.08	640	-5.65		
540	-17.54	650	-4.82		
550	-16.06	660	-4.05	1050	-1.61
560	-14.65	670	-3.34	1060	-2.12
570	-13.3	680	-2.7	1070	-2.7
580	-12.02	690	-2.12	1080	-3.34
590	-10.79	700	-1.61	1090	-4.05
600	-9.64	710	-1.16	1100	-4.82

The following figure graphically illustrates the adjustments for heifers and steers.

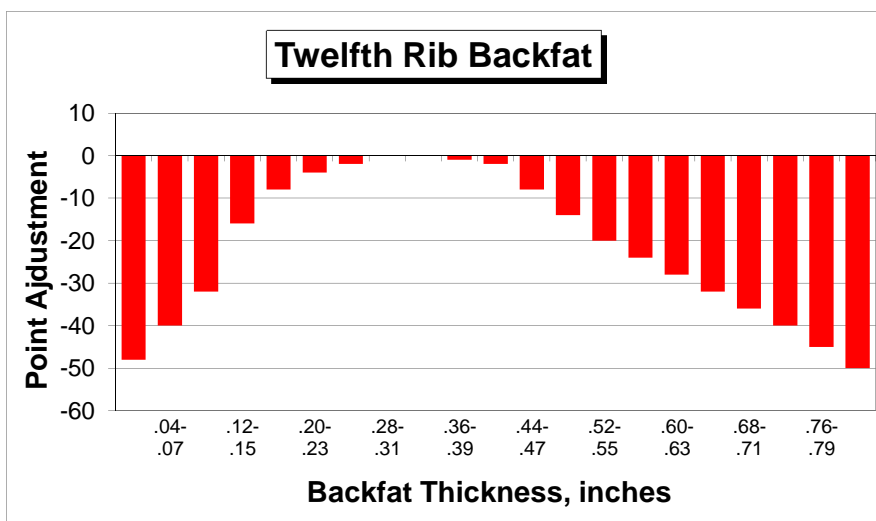

Adjusted Twelfth Rib Backfat Thickness

The optimum 12th rib fat thickness is defined as 0.30 inches which corresponds to a preliminary yield grade of 2.75 for both heifers and steers. Indices are negatively affected for carcasses having less than 0.28 inches or more than 0.36 inches of backfat.

Twelfth Rib Backfat Adjustment

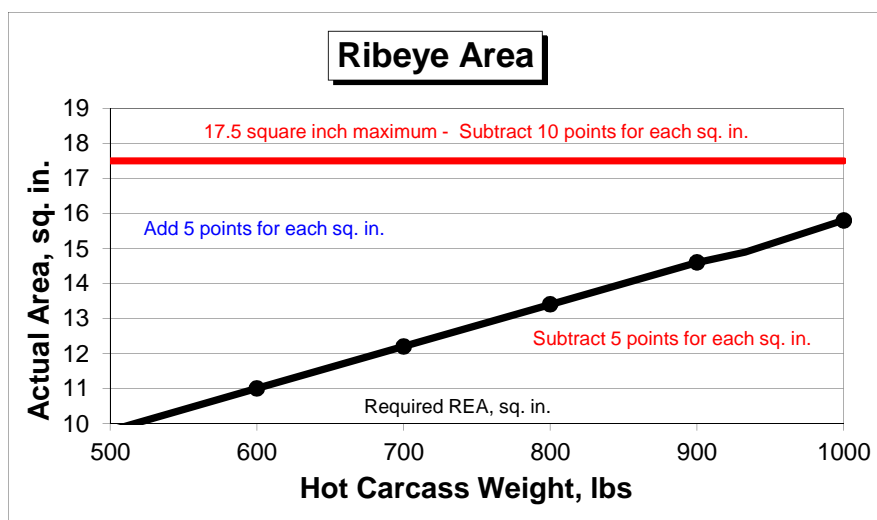

Fat Thickness	Points	Fat Thickness	Points
0.00 - 0.03	-48	0.44 - 0.47	-8
0.04 - 0.07	-40	0.48 - 0.51	-14
0.08 - 0.11	-32	0.52 - 0.55	-20
0.12 - 0.15	-16	0.56 - 0.59	-24
0.16 - 0.19	-8	0.60 - 0.63	-28
0.20 - 0.23	-4	0.64 - 0.67	-32
0.24 - 0.27	-2	0.68 - 0.71	-36
0.28 - 0.35	0	0.72 - 0.75	-40
0.36 - 0.39	-1	0.76 - 0.79	-45
0.40 - 0.43	-2	>0.79	-50

The following figure illustrates the adjustment for backfat thickness.

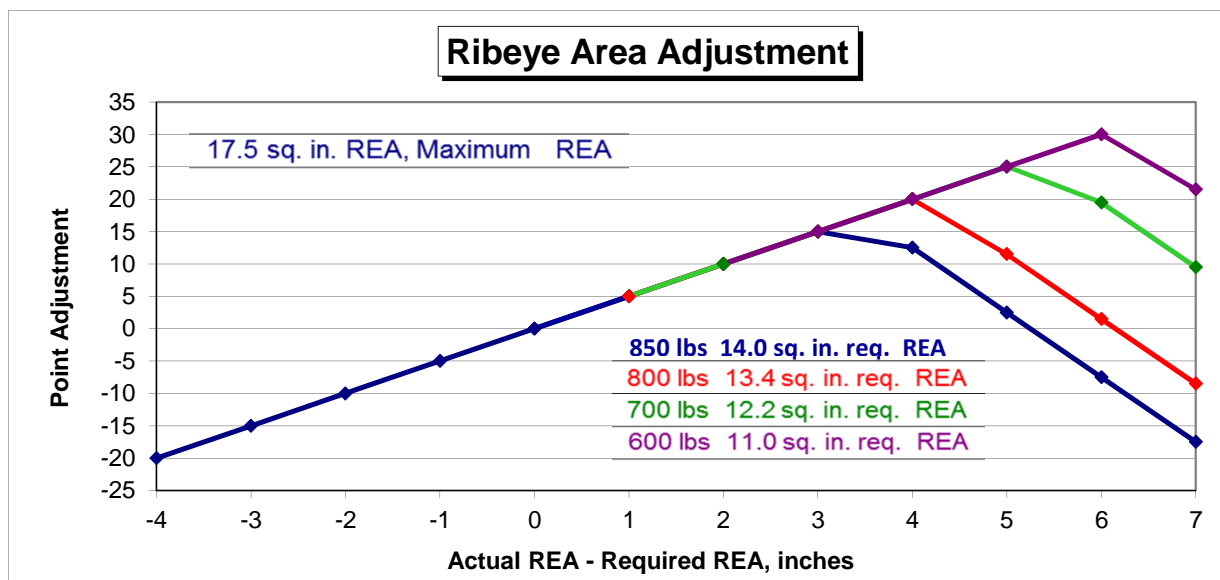

Ribeye Area

A ribeye requirement is calculated for each carcass based on hot carcass weight. The equation for both steers and heifers is: Required REA, sq. in. = HCW x .012 + 3.8. A 5 point adjustment will be made to the index for every square inch that a carcass ribeye area deviates from the required value. There is also a maximum REA of 17.5 square inches for steers and heifers. Carcasses with excessively large ribeyes will be penalized 10 points for each inch, or fraction of an inch, over the 17.5 square inch REA maximum. The relationship of actual and required REA, the maximum REA, and the associated bonus or penalty points is illustrated in the graph below. This is equivalent to the USDA required REA area for yield grade calculation.

The preceding graph demonstrates adjustment for the difference of the actual and required REA for various carcass weights.

Bonus and penalty points can also be calculated mathematically. For example, an 850 pound steer carcass would have a required REA of 14.0 square inches. If the carcass REA was 16.5 inches the index adjustment calculated as follows:

17.5 Maximum REA
 14.0 Required REA
 16.5 Actual REA
 Difference of 2.5 sq inches x 5 = + 12.5 Bonus Points

Example #2 850 pound
 steer carcass would have a required REA of 14.0 square inches. If the carcass REA was 18.5 inches the index adjustment calculated as follows:

17.5 Maximum REA
 14.0 Required REA
 18.5 Actual REA
 17.5-14.0 = 3.5 sq inches x 5 = 17.5 Bonus Points
 REA Actual +1.0 over Maximum Allowable = -10 Points
 This equals a final REA Index adjustment of +7.5 Points
 **Note Bonus points are only added for the REA up to 17.5 sq inches

Kidney, Pelvic and Heart Fat Adjustment

The internal kidney-pelvic-heart fat index basis is 2.5%. Carcasses with a lower KPH will receive bonus points while those with a higher KPH will be penalized as shown in the following table.

Internal Fat Adjustment

KPH	Points
0.0-1.5	2
1.6-2.0	1
2.1-2.9	0
3.0-3.4	-2
3.5-3.9	-4
4.0-4.4	-6
4.5-4.9	-8
≥5.0	-10

The following graph illustrates these adjustments.

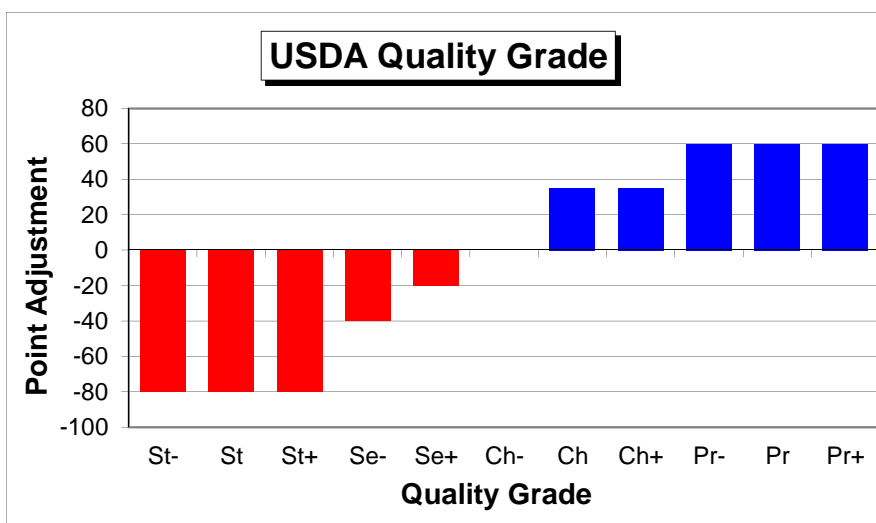

USDA Quality Grade

To be competitive in the carcass show, a carcass must grade at least low Choice. The index system severely penalizes a carcass grading Select or lower. Bonus points are given to carcasses that grade above low Choice.

Quality Grade Adjustment

Quality Grade		Points
Standard	Low	-80
	Average	-80
	High	-80
Select	Low	-40
	High	-20
Choice	Low	0
	Average	35
	High	35
Prime	Low	60
	Average	60
	High	60

These adjustments are illustrated in the following graph.

BED Carcass Index Examples

The following table demonstrates the bonus and penalty points for various potential carcass traits using the currently defined Beef Empire Days Carcass Index System.

	Carcass Number					
	1	2	3	4	5	6
Carcass Measurements						
Hot carcass weight, lbs.	750	800	850	900	700	800
Backfat, in.	0.3	0.33	0.4	0.21	0.53	0.37
Kidney-pelvic-heart fat, %	2.5	2.5	3	1.5	2.5	2
Ribeye area, sq. in.						
Actual	15.5	14.4	17.0	15.2	11.0	14.7
Required	12.8	13.4	14.0	14.6	12.2	13.4
Quality grade	Ch-	Ch-	Ch+	Pr	Se-	Ch-
Point Adjustments						
Hot carcass weight	0	0	0	0	-1.6	0
Backfat	0	0	-1	-4	-20	-1
Kidney-pelvic-heart fat	0	0	-2	2	1	1
Ribeye area	13.5	5	15	3	-6	6.5
Quality grade	0	0	35	60	-40	0
Total adjustment	13.5	5	47	61	-66.6	6.5
Index base	100	100	100	100	100	100
Index total	113.5	105	147	161	33.4	106.5
